Overall I like this, but maybe remove the “stok gudang” widget next to the search bar, cuz I feel like it’s a bit redundant with the product scroll below. Some of the fonts (for the product page) also still feel a bit “techy” if u catch my drift like maybe change it to be more similar to the main font.

It is cleaner with the white background, but perhaps a bit more contrast / depth would be better (lines, color shading/gradient). Some more use of dark green, green, or black could be added here n there. Like this contact form could be dark green or black, but the overall vibe of the homepage scroll is still “light/white”

I think in the final version there could be like a background images for the home page too (example below). Plus the customer logos, the “tentang kami” part, and the “industry” part would need to add some more images.
